WATT BOX®

Small & Mighty

WattBox products are uniquely designed to bring unmatched control and troubleshooting to your most frequently used devices. And with the ultra-compact 150- and 250-Series, your integrator can place them just about anywhere. We even offer a Wi-Fi option to help expand your connectivity without the look of messy cables or wires.

LOW PROFILE

If you love the idea of managing your network devices and other electronics through an app, but hate the look of a bulky power strip, then the WattBox 150 and 250 are the perfect additions to your technology setup. These minimalist power devices fit easily behind or under furniture, on the back of a TV, or under a desk.
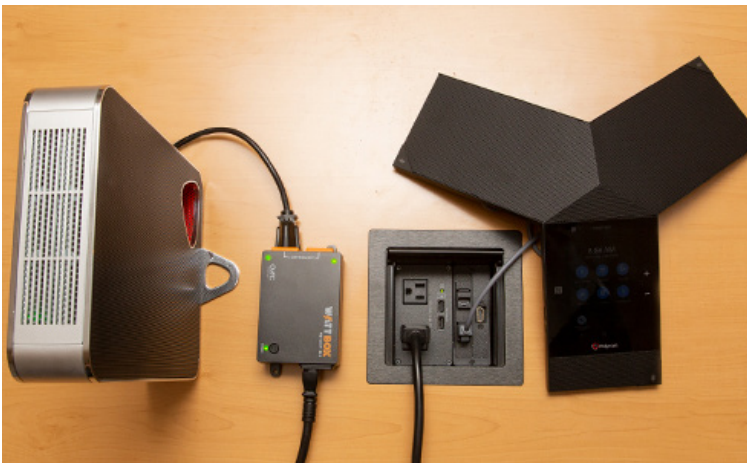

SELF-HEALING

WattBox products are uniquely designed to fix themselves without any outside intervention, keeping you from having to call your integrator and schedule an appointment. The unit continuously troubleshoots and addresses issues before they become a larger problem.

TAKE CONTROL

With your WattBox purchase, you'll receive access to an intuitive remote management mobile app. The interface is easy to navigate and lets you reboot your device with the push of a button, getting you back online in no time. Plus, if you ever need to reach your installer, you can access their contact information easily within the app.
