

STRONG™ 24U & 42U NETWORK RACK ENCLOSURE

42U (30" & 40") | 24U (30")

Ideal for creating a solid foundation for your mission critical IT/ Datacomm infrastructures, these network rack enclosures are built tough to handle even the most complex applications. Featuring a fully welded design, integrated wire management, and vented doors, these 30-in. and 40-in. racks are built to keep gear organized and safe.

EASY ORGANIZATION

Integrated vertical wire management keeps cables neat and tidy, while numbered holes across the top, bottom, and middle make it easy to get perfectly straight rails. And speaking of rails, they feature EIA-310-D standard, square-punched holes – so attaching gear couldn't be simpler.

KEEPING IT COOL

The key to a long-lasting rack is maintaining a steady temperature and keeping components cool – which means proper ventilation is a must. These racks have fully vented front and rear doors that allow for a constant flow of cooling air.

BUILT STRONG AND SMART

A fully welded design and attached casters allow these racks to support a whopping 2,200 lbs., and all the doors lock for maximum security. The back doors are also split, so you only have to open them half as much – a big advantage in tight server closets.

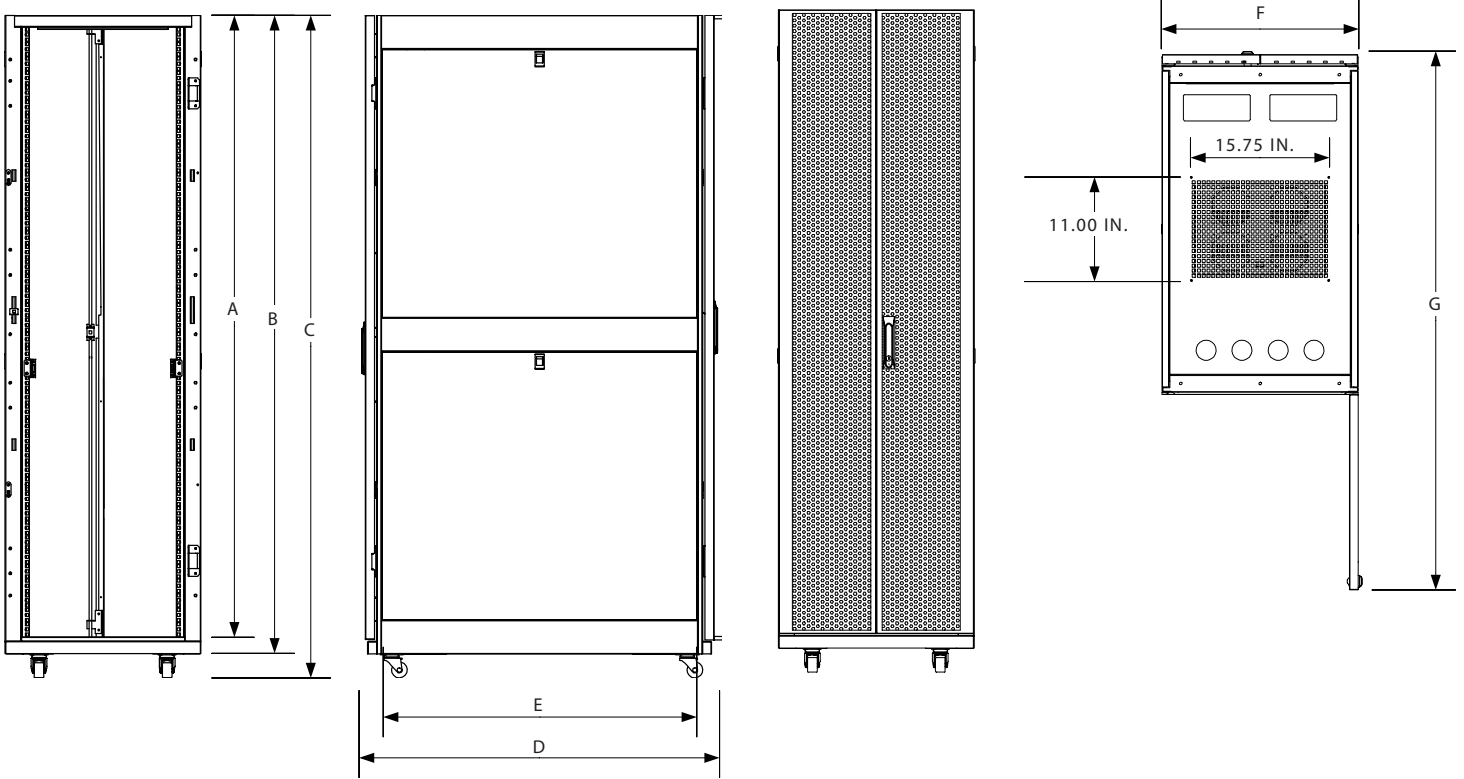

WARRANTY:

Strong™ Racks and Rack Accessories have a Lifetime Limited Warranty. This warranty includes parts and labor repairs on all components found to be defective in material or workmanship under normal conditions of use. This warranty shall not apply to products which have been abused, modified or disassembled. Products to be repaired under this warranty must be returned to SnapAV or a designated service center with prior notification and an assigned return authorization number (RA).
