

Episode™ Acoustic Panels

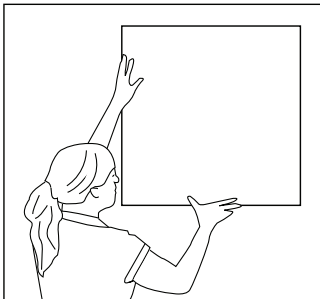

• ES-AP-24X24 • ES-AP-24X40 • ES-AP-18X60

PLACEMENT

Acoustic panels in a home theater setting should typically cover 15%-25% of the room's wall surfaces. Varying the coverage amount will produce the sound you desire. The more panels, the more "dead" the room will sound. If more reflection is desired, fewer panels should be used.

INSTALLATION

Easy 1-2-3 Installation (hardware included)

1. Choose proper location:
 - Typically listening position ear level
 - Typically directly behind and at first reflection locations
 - Add additional panels for further sound deadening
2. Set hanger
3. Place Episode™ Acoustic Panels on wall

PERFORMANCE | Low ————— Frequency ————— High |

NRC = Noise Reduction Coefficients (rating how absorptive material is)

WARRANTY

Lifetime Limited Warranty

All Episode™ Acoustic Panels have a Lifetime Limited Warranty. This warranty includes parts and labor repairs on all components found to be defective in material or workmanship under normal conditions of use. This warranty shall not apply to products which have been abused, modified or disassembled. Products to be repaired under this warranty must be returned to Snap AV or a designated service center with prior notification and an assigned return authorization number (RA).
