

Episode™ PRO Series Sound Dampening Barrier

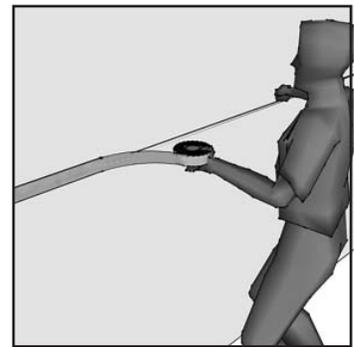

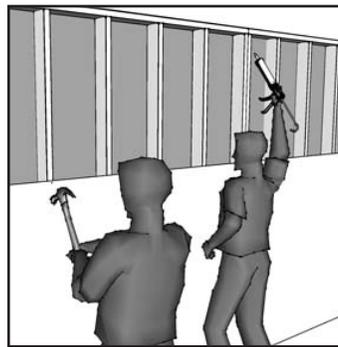

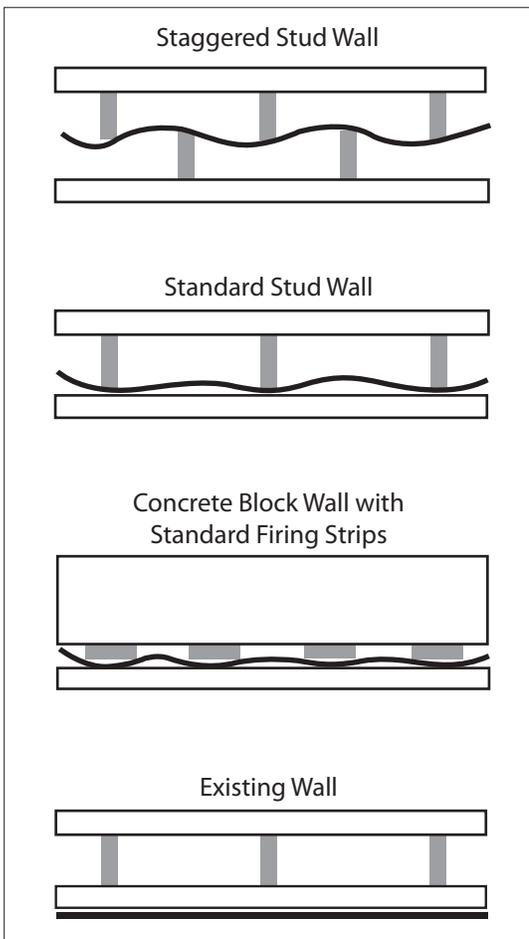

- ES-DM-48X96
- ES-DM-48X120

Episode™ PRO Sound Dampening Barrier is designed to significantly reduce noise transfer from adjacent walls, ceiling, or floors. It is made in the USA from non-PVC recycled materials and offers reduction in noise levels by 75% plus, acts as a moisture barrier.

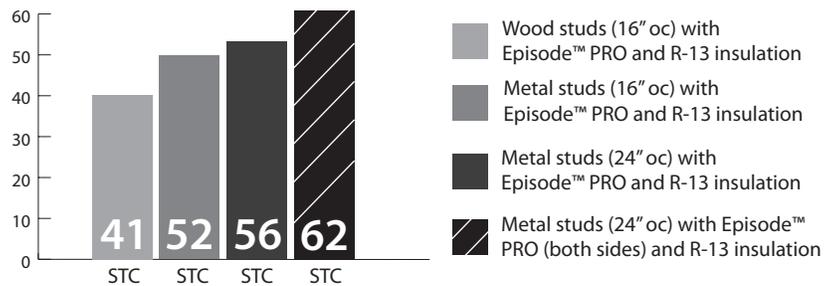

INSTALLATION AND PLACEMENT

Episode™ PRO Sound Dampening Barrier can be installed horizontally or vertically on floors, walls, and ceilings.

1. Staple, nail, or glue the Episode™ PRO Sound Dampening Barrier to the stud framing.
2. Place the Episode™ PRO Sound Dampening Barrier fully abutted against the next piece to ensure minimal noise leakage and use a layer of adhesive caulk to further bond the layers together. The goal is to avoid all leaks to maximize sound isolation.
3. Bond multiple Episode™ PRO Sound Dampening Barriers together with caulk and anchors to completely cover all areas. Duct tape can be used after bonding together to offer additional protection. (See below for layout examples)

PERFORMANCE

STC is a method used to gauge sound transmission loss through a wall. A higher STC rating blocks more noise from transmitting through a partition.

PRODUCT SPECIFICATIONS

- Class A Fire and Smoke Rating
- Does not support mold growth
- Impermeable to moisture
- Reduces noise levels up to 75%

WARRANTY

Lifetime Limited Warranty

All Episode™ Sound Barriers have a Lifetime Limited Warranty. This warranty includes parts and labor repairs on all components found to be defective in material or workmanship under normal conditions of use. This warranty shall not apply to products which have been abused, modified or disassembled. Products to be repaired under this warranty must be returned to Snap AV or a designated service center with prior notification and an assigned return authorization number (RA).
