

Speed Through High-Traffic Superhighways

Araknis routers provide a high-speed connection that makes for a hassle-free network experience, along with a cloud-based device management software that gives your integrator the option for remote troubleshooting. Araknis Networks® understands the importance of modern, seamless connectivity, which is why we focus on one thing: making your net work.

FEATURES

THE NEED FOR SPEED

When it comes to networking, every second counts. That's why our routers come equipped with 1 Gbps throughput on all LAN ports, for faster speeds and a better experience.

IRON-CLAD INTERNET

An embedded firewall supports Stateful Packet Inspection (SPI), Denial of Service (DoS) prevention, WAN Request Blocking, and OpenVPN. Its layers of network security make it harder for hackers to attack, so your private data stays safe. And with multiple content filtering levels, you can ensure your household has a safe browsing experience.

RELIABLE CONNECTION

Dual-gigabit WAN allows you to connect to two different ISPs (for example: TWC and Comcast), so you'll never lose your connection in the case of service failure.

SPEC FEATURES	300-series
WAN-LAN Throughput	~500Mbps
LAN-LAN Throughput	1Gbps
Number of Gigabit LAN Interfaces	4
Number of Gigabit WAN Interfaces	2
WAN Load-balancing and Link Failover	Yes
VPN Support	PPTP, IPSec, OpenVPN
VLAN Support	Yes - 802.1Q
QoS Support	Yes - 802.1p
Access Control Lists	Yes
Cloud Management Capability	Yes
Limited Product Warranty	2-Year
