

welcome to araknis networks®

Araknis offers a line of enterprise-grade switches (unmanaged, managed, and managed with PoE) that have been engineered to meet today's most stringent networking requirements for powerful performance and big bandwidth. Equipped with top-grade, focused feature sets and support for 1 Gbps across all ports simultaneously, they offer the connectivity needed for even the most demanding environments. Available in a variety of sizes with options for front- or rear-facing ports, these switches provide reliable networking support designed specifically for custom installers.

100-SERIES MANAGED GIGABIT SWITCHES

Araknis 100-Series Unmanaged Switches feature 1Gbps on all ports simultaneously, making them perfect for high-bandwidth devices, video streaming, and more. Available in a variety of sizes - from 8- to 24 ports - each switch features an all-metal chassis and fanless design for silent operation. With options for front-facing or rear-facing ports, they offer reliable networking support and install flexibility for a wide range of AV and IT applications.

ALL SWITCHES ARE TOLLY CERTIFIED

Tolly is the leading provider of benchmarking services to quantify the functionality and performance of hosted and on-premise solutions for Information Technology products and services. Working as an independent test laboratory and provider of third-party validation services, Tolly has worked with virtually every major IT vendor and evaluated the most important products and technologies to appear over the past decade; a Tolly-certified product provides evidence that a product meets or exceeds its performance claims. The Araknis™ 100 Series Unmanaged Switch (AN-100-SW-R-24) was independently tested and verified in both feature and performance comparisons versus Cisco Systems and Pagedge products.

300-SERIES MANAGED GIGABIT SWITCHES

Araknis 300-Series Managed Switches feature 1Gbps on all ports simultaneously, offering the powerful connectivity needed for demanding applications. They're available in a range of sizes - from 8- to 24 ports - and are accompanied by an intuitive user interface that makes network setup a snap, while allowing for advanced monitoring and straightforward troubleshooting. Available with front-facing or rear-facing ports, these managed switches offer reliable networking and install flexibility for a wide range of AV and IT applications.

300-SERIES MANAGED GIGABIT SWITCHES WITH POE

Araknis 300-Series Managed with PoE Switches feature 1Gbps on all ports simultaneously, making it easy to integrate with surveillance systems, control system touch panels and WAPs on the network. They support full PoE / PoE+ to provide powerful connectivity and a clean, one-wire solution. Araknis switches come in a range of sizes from 8- to 24 ports, and feature an intuitive user interface that makes network setup a snap, while allowing for advanced monitoring and straightforward troubleshooting. Available with front-facing or rear-facing ports, they offer reliable network support and install flexibility for a wide range of AV and IT applications.
