

FIRMWARE UPDATE NOTES

RELEASE DETAILS

Release Date: **12/12/2019**

Firmware Version: **5.0.00**

Product SKUs Affected: **OVRC-300-PRO, OVRC-100-PRO (OVRC-100-HUB)**

PRIORITY: IMPORTANT

ADDED/REMOVED FEATURES

This firmware adds support for APC power, Triad matrix switchers, as well as other minor UI enhancements and bug fixes.

ENHANCEMENTS

Added OvrC third-party integration for the following APC power products:

- » AP8xxx & AP7xxxB series

Added OvrC third-party integration for the following Triad matrix switching products:

- » AMS-8 & AMS-24

Added future updatability support without needing to firmware upgrade.

- » **NOTE:** This new update mechanism requires that the hub have an internet connection to allow access to its local UI.

RESOLVED ISSUES

Fixed issue with WEMO devices, wherein the hub would reboot or restart applications.

Fixed issue wherein blank hub interface cards would display in OvrC.

Fixed issue with online/offline status misreporting in the Hub local UI.

KNOWN ISSUES

The ampersand symbol "&" cannot be used in the password at this time.
