

How to Wall Mount Josh Micro

These directions can also be viewed online at: www.josh.ai/setup/poe

Step 1: Pick a Location

A great place to mount Josh Micro is near doorways (in a similar location as thermostats or light switches). We don't recommend ceiling mounting Josh Micro or placing it in bathrooms or other areas with high humidity and exposure to extreme temperatures. JStar LLC is not liable for damage as a result of improper installation or exposure to the elements.

Step 2: Mark the Spot

Hold the black wall mount ring (included) up to the wall you've chosen to mount Micro to. Mark the inner circle and the three screw locations in pencil. Use a 1/8" drill bit for the screw holes, and at least a 3/4" drill bit for the POE adapter. Don't worry if the base screw holes aren't lined up perfectly. Josh Micro magnetically attaches to the base and can be straightened at any point.

Step 3: Drill the Holes

Drill three 1/8" holes for the wall screws and a center hole for the POE cable. Again, don't worry if the base screw holes aren't lined up perfectly. Josh Micro magnetically attaches to the base and can be straightened at any point.

Step 4: Mount the Ring

Install the wall mount ring to the wall using the provided screws. Make sure the ring is snug, but no need to overtighten. If you misplace the screws, let us know and we can help you get replacements. In some cases you'll want to get drywall anchors as well to help the screws hold.

Step 5: Plug in Micro

Connect the POE adapter (provided) to your POE cable, then plug the USB-C end of the adapter into the bottom of Josh Micro. When Micro is ready to set up you'll see the LEDs light up blue. If the unit doesn't power on, make sure the POE cable is delivering both power as well as network connectivity.

Step 6: Wall Mount Micro

Bring the Micro to the wall mount ring while feeding the POE cable through the wall. It should fit snug to the wall mount. Finally, rotate Josh Micro making sure the dog logo is properly oriented and level.
