

Wall Mounting

- Recommended placement is at approximately shoulder height near doorways and entrance ways in similar areas as thermostats or light switches.
- Maintain a clear line of sight to Josh Micro from anywhere in the room, do not obstruct visibility with large objects or furniture as that may interfere with the audio path.
- Be aware of nearby windows, which might inadvertently give someone outside of the home access to your Josh.ai system and the devices under its control.

Surface Placement

- Recommended locations include kitchen countertops, bed-side tables, and living room shelves or tables away from sources of noise.
- Avoid placing Josh Micro near TVs and speakers, which might interfere with voice commands or possibly activate it accidentally.
- Add a Josh Micro stand to increase visibility of LEDs for an improved user experience.
- Make sure to keep Josh Micro at least eight inches from any walls, corners, or other impediments that will affect its surrounding acoustics.

Other Considerations

- If you are planning on placing Josh Micro on a ceiling, take care to properly secure the included wall mount. It is strong enough to suspend Josh Micro upside down.
- For bathrooms, outdoor use, or other areas with high humidity or environmental conditions beyond its operating threshold, make sure to shield Josh Micro from the elements as best as possible.
- Josh.ai is not liable for any damage to Josh Micro as a result of improper installation, water damage, or extreme temperature exposure.

Please follow best practices as outlined here in this document as well as on the wall mounting guideline. These directions can also be viewed online at: www.josh.ai/setup/placement
