

Episode Element Subwoofers deliver maximum bass performance in a small package. Its ported design reduces distortion, and the power-saving standby mode automatically turns off after 15 minutes of inactivity, then comes to life as soon as a signal is detected. High and low-level outputs give this subwoofer the versatility to work in any application.

## **Efficient Performance**

The highly-efficient DRiVe™ Class-D amplifier consumes only 0.5 watts in standby mode, making it up to 60% more efficient than conventional subwoofer designs.

## **Powerful Sound**

A dual EQ system delivers a lower frequency response, and an accordion-like ribbed surround allows for linear cone movement that reduces distortion, even at high volumes.

## **Innovative Design**

Aerodynamic slot ports set Element subwoofers apart by minimizing turbulence and maximizing output, so all you hear is solid bass.

## **Element Series Subwoofer | Up to 720W**
