

Snap One SunBriteTV Veranda 3 IP ELAN Driver
V1.0.1 rev20220617

Overview

This driver integrates a Snap One SunBriteTV Veranda 3 IP into your ELAN control system. The driver was created and tested on a gSC2 series controller using g!Viewer. To use this driver, add the driver to the system, and follow the setup.

Specification

This package includes the following:

- Compiled ELAN Driver (Snap_One_SunBriteTV_Veranda3.EDRVC)
 - Controls hardware device.

IP Connection

The driver communicates to and from the device through an IP connection and must be connected for the driver to function. Please ensure the TV is operating normally outside of the control system before integrating.

Note: Use of a hard wired ethernet connection is strongly recommended with all control systems to ensure a reliable IP connection. Devices connected via Wi-Fi may drop connection periodically when placed into Standby.

Setup

1. Enter the IP Address of the SunBriteTV. Port should be set to 60028.
2. If using TV volume, make sure you're setting Volume Control to "THIS ZONE".

Change Log

V1.0.1 – Added support for WOL Packet for powering on

V1.0.0 - Release
