

## Release Notes: Visualint Line Micro

### V7.4.0 build 20170621

Priority: **IMPORTANT**

Released: 2017/09/06

This firmware is required to get full functionality from your Visualint Line Micro NVR and IP cameras! This firmware adds several enhancements, and fixes a number of issues.

### Models Affected

VI-L-MICRO

### Enhancements

1. Ability to connect channels from other "Line" servers as IP cameras.
2. Receiving HLS and FLV streams with sound (?audio = 1).
3. The speed of the video archive has been increased.
4. IP cameras support engine was improved.
5. IP cameras support list was extended.

### Issues Resolved

1. Cycled record mode works incorrectly if during deleting the oldest day of an archive is played back same day.
2. Increasing RAM usage during playback and it does not decrease after closing the app.
3. In some cases, the preset administrator's rights are limited.
4. Users cannot be added after one of the standard users have been deleted.
5. Server disaster restart after disabling a channel or restarting a video stream from an IP camera.
6. Some older models of D-Link cameras cannot be connected.

### Known Issues

1. Requires client version 7.4 and higher for some features to work.
