

Visualint Control

- Visualint Control is designed for those installations without a control or automation system
- Add I/O for Intergration in an control or automation system
- Arm/disarm cameras from virtually any alarm system via dry contact input
- Arm/disarm cameras from virtually any access keypad or reader via dry contact input
- Disable/Enable video stream from input change
- Control relays and outputs upon camera event
- Control Visualint viewer from camera
- Unlimited number of controllers per system
- Remotely control outputs
- Activate events on remote sites
- Built-in web interface for configuration, status and maintenance

How often do your clients wish they could turn the cameras off at certain times or when different events occur? Examples of this are turning internal cameras off while they are home or turning the camera off that covers the spa while the spa is in use. Every Visualint camera supports two-way communication. This is all possible through a control system or Visualint Control.

Visualint Control allows you to switch relays or outputs upon any event adding the advantages of Visualint intelligence to any system.

FUNCTION	
Model	VI-Control
Relay	2 General Purpose Relay SP / DT
Outputs	8 open-collector
Inputs	8 digital
Indicators	8 LED
Switches	Manual Test Switches for inputs 1-4

ELECTRICAL	
Power Input	12vDC, maximum 2A
Connections	Connect with screw terminals
Enclosure	Cover screws into brass inserts,
Wall Mounting	Surface-mounting flanges
Cable Entry	Cable gland entry
Weather Rating	Indoor Only
