

Super B Wire Connector Crimping Tool

For use with B-Connectors: DC-100P, DC-100S, DC-1000P, DC-1000S

The Dolphin Super B-Wire Connectors are intended to be used for low voltage control, burglar alarms, telecom, and many other applications using 26 to 16 AWG solid or stranded wires. The DC-500F is a side loading manual crimping tool instructions for Super B-Wire Connectors and other solderless connectors.

CRIMPING INSTRUCTIONS

1. It is not necessary to strip small gauge solid wires (two 26 to 18 AWG). For 16 AWG wire, strip a ½" of insulation; for stranded wire, strip and twist the wire to ease it between the inner barbs. Insert wires towards back of connector.
2. Open the DC-500F manual crimping tool and insert the DOLPHIN® B- Connector from the side of the tool into the Red or Blue slots, and squeeze the handles. Make two or three separate crimps near the center of the connector.
