

# SureCall Fusion2Go 3.0™

## THE NEW CHAMPION OF THE ROADS

The Fusion2Go 3.0™ is the newest generation to a line of in-vehicle signal boosters that is purpose-built for those who frequent the fringe of the mobile network. Leading in reliability and performance, Fusion2Go 3.0 is securing the trust of oil and gas, public safety, government, forestry, and many other industries and mission

critical applications. Third party tests between the SureCall Fusion2Go 3.0 and the leading competitor's best vehicle booster have found Fusion2Go 3.0 to have 2X more output power and significantly faster data speeds\*, providing multiple simultaneous users with reliable access to calling, text, and mobile data even further from the tower.

## How It Compares to the Competition

**2X  
POWER**

### POWER THAT PUSHES THE BOUNDARY

Typically the reason calls drop or never connect, texts go unsent, and data fails in areas on the extreme fringe of the mobile network stems from your phone not having enough power to send a signal back to the nearest tower. The SureCall Fusion2Go 3.0 has the 2X more output power\* to keep you connected even further into the cellular void.

**FAST  
DATA**

### FASTER DATA SPEEDS

When transferring mobile data – emails, images, applications, etc. – users need a high-quality amplifier with a lower downlink ripple and error vector magnitude (EVM). The SureCall Fusion2Go 3.0 outperformed the nearest competition\* by more quickly and reliably sending and receiving mobile data in tough-to-reach areas.

**100%  
COVERED**

### ALL CARRIERS. ALL SIGNALS. ALWAYS COVERED.

SureCall Fusion2Go 3.0 works with every mobile network in North America and, once installed, fleets are reliably connected with the most powerful vehicle booster on the market. SureCall stands by the performance and quality of the Fusion2Go 3.0. All SureCall products are supported with the industry's best 3-year warranty.
